

Affinity Gel-conjugated Mouse anti GFP-Tag mAb

{Anti-GFP □□□□}

Catalog No.: AE112

Basic Information

Observed MW

68kDa

Calculated MW

27kDa

Category

Tag antibody

Applications

IP

Cross-Reactivity

Species independent

CloneNo number

AMC0483R-Affinity Gel

Conjugate

Affinity Gel

Recommended Dilutions

IP 20ul antibody (bead
slurry) for 200μg-400μg
extracts of whole cells

Background

The green fluorescent protein (GFP) is a protein composed of 238 amino acid residues (26.9 kDa) that exhibits bright green fluorescence when exposed to light in the blue to ultraviolet range. Although many other marine organisms have similar green fluorescent proteins, GFP traditionally refers to the protein first isolated from the jellyfish *Aequorea victoria*. The GFP from *A. victoria* has a major excitation peak at a wavelength of 395 nm and a minor one at 475 nm. Its emission peak is at 509 nm, which is in the lower green portion of the visible spectrum. The GFP from the sea pansy (*Renilla reniformis*) has a single major excitation peak at 498 nm. GFP makes for an excellent tool in many forms of biology due to its ability to form internal chromophore without requiring any accessory cofactors, gene products, or enzymes / substrates other than molecular oxygen. In cell and molecular biology, the GFP gene is frequently used as a reporter of expression. It has been used in modified forms to make biosensors, and many animals have been created that express GFP, which demonstrates a proof of concept that a gene can be expressed throughout a given organism, in selected organs, or in cells of interest. GFP can be introduced into animals or other species through transgenic techniques, and maintained in their genome and that of their offspring. To date, GFP has been expressed in many species, including bacteria, yeasts, fungi, fish and mammals, including in human cells.

Immunogen Information

Gene ID**Swiss Prot****Immunogen****Synonyms**

GFP;GFP tag;GFP-tag

Product Information

Source

Mouse

Isotype

IgG2b,Kappa

Purification

Affinity purification

Storage

Store at -20°C. Avoid freeze / thaw cycles.

Buffer: PBS with 0.03% sodium azide, 50% glycerol, pH 7.3.

Validation Data

Immunoprecipitation analysis of 300 µg extracts of 293T-SERPINB1-Flag-GFP-N cells using 30ul Affinity Gel-conjugated Mouse anti GFP-Tag mAb (AE112). Western blot was performed from the immunoprecipitate using Rabbit anti GFP-Tag mAb(AE078) at a diltion of 1:200000.

Immunoprecipitation analysis of 300 µg extracts of 293T-SERPINB1-Flag-GFP-C cells using 30ul Affinity Gel-conjugated Mouse anti GFP-Tag mAb (AE112). Western blot was performed from the immunoprecipitate using Rabbit anti GFP-Tag mAb(AE078) at a diltion of 1:200000.
