NR1H4 Knockout 293T Cell Lysate, Homozygous

Catalog No.: RM50001

Basic Information

Catalog No.
RM50001

Category
Cell Lysate

Parental Cell line
293T

Genotype
Knockout

Background

This gene encodes a ligand-activated transcription factor that shares structural features in common with nuclear hormone receptor family members. This protein functions as a receptor for bile acids, and when bound to bile acids, binds to DNA and regulates the expression of genes involved in bile acid synthesis and transport. Alternatively spliced transcript variants encoding different isoforms have been described.

Product Information

Description
NR1H4 Knockout cell line is engineered from 293T cell line with Gene-Editing Technology.
Allele-1:107bp deletion in exon2
Allele-2:107bp deletion in exon2
Mammalian cells such as human, rat and mouse cells are normally diploid with two alleles. Homozygote: both alleles were knocked out, mRNA has no signal, no expression of proteins. Heterozygote: only one allele was knocked out, the mRNA transcript levels was decreased compared to wild type, and the protein expression levels was also lower than that of the wild type.
