

ORC2 Rabbit pAb

Catalog No.: A15697 **1 Publications**

Basic Information

Observed MW

80kDa

Calculated MW

66kDa

Category

Primary antibody

Applications

ELISA,WB

Cross-Reactivity

Human

Background

The origin recognition complex (ORC) is a highly conserved six subunits protein complex essential for the initiation of the DNA replication in eukaryotic cells. Studies in yeast demonstrated that ORC binds specifically to origins of replication and serves as a platform for the assembly of additional initiation factors such as Cdc6 and Mcm proteins. The protein encoded by this gene is a subunit of the ORC complex. This protein forms a core complex with ORC3, -4, and -5. It also interacts with CDC45 and MCM10, which are proteins known to be important for the initiation of DNA replication. This protein has been demonstrated to specifically associate with the origin of replication of Epstein-Barr virus in human cells, and is thought to be required for DNA replication from viral origin of replication. Alternatively spliced transcript variants have been found, one of which is a nonsense-mediated mRNA decay candidate.

Recommended Dilutions

WB 1:500 - 1:2000

Immunogen Information

Gene ID

4999

Swiss Prot

Q13416

Immunogen

Recombinant fusion protein containing a sequence corresponding to amino acids 458-577 of human ORC2 (NP_006181.1).

Synonyms

ORC2L; ORC2

Product Information

Source

Rabbit

Isotype

IgG

Purification

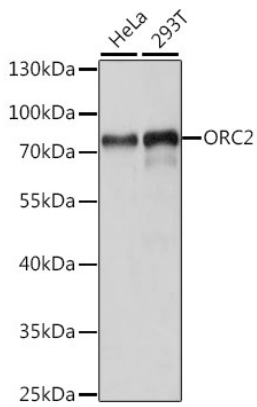

Affinity purification

Storage

Store at -20°C. Avoid freeze / thaw cycles.

Buffer: PBS with 0.01% thimerosal,50% glycerol,pH7.3.

Validation Data

Western blot analysis of various lysates using ORC2 Rabbit pAb (A15697) at 1:1000 dilution.
Secondary antibody: HRP Goat Anti-Rabbit IgG (H+L) (AS014) at 1:10000 dilution.
Lysates/proteins: 25µg per lane.
Blocking buffer: 3% nonfat dry milk in TBST.
Detection: ECL Basic Kit (RM00020).
Exposure time: 10s.
