Background

This gene encodes a member of the forkhead class of DNA-binding proteins. These hepatocyte nuclear factors are transcriptional activators for liver-specific genes such as albumin and transthyretin, and they also interact with chromatin. Similar family members in mice have roles in the regulation of metabolism and in the differentiation of the pancreas and liver. This gene has been linked to sporadic cases of maturity-onset diabetes of the young. Transcript variants encoding different isoforms have been identified for this gene.

Immunogen Information

Gene ID

3170

Swiss Prot

Q9Y261

Immunogen

Recombinant fusion protein containing a sequence corresponding to amino acids 1-160 of human HNF3β/FOXA2 (Q9Y261).

Synonyms

HNF3B; TCF3B; HNF-3-beta; HNF3β/FOXA2
