Leader in Biomolecular Solutions for Life Science

DNMT3B Rabbit mAb

Catalog No.: A22658 Recombinant

Basic Information

Observed MW 100kDa

Calculated MW 96kDa

Category Primary antibody

Applications WB,ELISA,ChIP,ChIP-seq

Cross-Reactivity Human, Mouse

CloneNo number ARC57702

Background

CpG methylation is an epigenetic modification that is important for embryonic development, imprinting, and X-chromosome inactivation. Studies in mice have demonstrated that DNA methylation is required for mammalian development. This gene encodes a DNA methyltransferase which is thought to function in de novo methylation, rather than maintenance methylation. The protein localizes primarily to the nucleus and its expression is developmentally regulated. Mutations in this gene cause the immunodeficiency-centromeric instability-facial anomalies (ICF) syndrome. Eight alternatively spliced transcript variants have been described. The full length sequences of variants 4 and 5 have not been determined.

Recommended Dilutions

WB	1:1000 - 1:5000
ELISA	Recommended starting concentration is 1 µg/mL. Please optimize the concentration based on your specific assay requirements.
ChIP	5µg antibody for 10µg-15µg of Chromatin
ChIP-seq	1:50 - 1:100

Immunogen Information

Gene ID 1789

Swiss Prot Q9UBC3

Immunogen

Recombinant protein (or fragment). This information is considered to be commercially sensitive.

Synonyms

ICF; ICF1; FSHD4; M.HsallIB; DNMT3B

Product Information

Source Rabbit **lsotype** IgG **Purification** Affinity purification

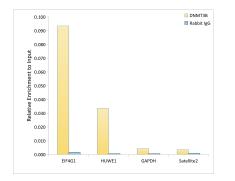

Storage

Store at -20°C. Avoid freeze / thaw cycles. Buffer: PBS with 0.05% proclin300,0.05% BSA,50% glycerol,pH7.3.

Validation Data

Chromatin immunoprecipitation was performed with 14 µg of cross-linked chromatin from NCCIT cells using 5 µg of DNMT3B Rabbit mAb (A22658). DNA libraries were prepared using Scale ssDNA-seq Lib Prep Kit for Illumina V2 (RK20228). The ChIP sequencing results indicate the enrichment pattern of DNMT3B in the representative genomic region surrounding HUWE1 gene.

Adding to Le M. Adding a france

Chromatin immunoprecipitation was performed with 10 μ g of cross-linked chromatin from NCCIT cells, using 5 μ g of DNMT3B antibody (A22658) and Rabbit IgG isotype control (AC042). The enrichment of immunoprecipitated DNA at different genomic loci was examined by quantitative PCR. The histogram compares the ratio of the immunoprecipitated DNA to the input at given loci.
