# **APC Rabbit IgG isotype control**

Catalog No.: A24173

#### **Basic Information**

**Observed MW** 

**Calculated MW** 

Category

Primary antibody

**Applications** 

FC

**Cross-Reactivity** 

CloneNo number

ARC5105-10-APC

Conjugate

APC. Ex:650nm. Em:660nm.

## **Background**

The isotype of a primary antibody and the application it is being used in can result in background staining. Primary antibody background noise can be caused by binding to Fc receptors on target cells; by non-specific interactions with cellular proteins, carbohydrates, and lipids; or by cell autofluorescence. Isotype control antibodies can act as negative controls to help differentiate non-specific background signal from specific antibody signal because they have no relevant specificity to a target antigen. An isotype control antibody should have the same immunoglobulin type and be used at the same concentration as the test antibody.

## **Recommended Dilutions**

FC

5  $\mu$ l per 10^6 cells in 100  $\mu$ l volume

### **Immunogen Information**

Gene ID

**Swiss Prot** 

Immunogen

A synthesized peptide derived from rabbit IgG isotype control.

**Synonyms**

#### **Product Information**

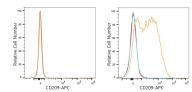

SourceIsotypePurificationRabbitIgGAffinity purification

**Storage** 

Store at 2-8°C. Avoid freeze.

Buffer: PBS with 0.03% proclin300,0.2% BSA,pH7.3.

## **Validation Data**

Flow cytometry: 1X10^6 293F cells (negative control,left) and THP-1 cells (right) were surface-stained with APC Rabbit anti-Human CD209/DC-SIGN mAb (A23594,5  $\mu | \text{Test,orange line})$  or APC Rabbit IgG isotype control (A24173,5  $\mu | \text{Test,blue line})$ . Non-fluorescently stained cells were used as blank control (red line).
