Background

The protein encoded by this gene is the alpha subunit of the heterodimeric receptor for colony stimulating factor 2, a cytokine which controls the production, differentiation, and function of granulocytes and macrophages. The encoded protein is a member of the cytokine family of receptors. This gene is found in the pseudoautosomal region (PAR) of the X and Y chromosomes. Multiple transcript variants encoding different isoforms have been found for this gene, with some of the isoforms being membrane-bound and others being soluble.

Validation Data

Western blot analysis of various lysates using CD116/GM-CSFR α Rabbit mAb (A25547) at 1:1000 dilution. Secondary antibody: HRP Goat Anti-Rabbit IgG (H+L) (AS014) at 1:10000 dilution. Lysates/proteins: 25 μ g per lane. Blocking buffer: 3% nonfat dry milk in TBST. Detection: ECL Basic Kit (RM00020). Negative control (NC): 293T. Exposure time: 90s.

Flow cytometry: 1×10^6 293F cells (negative control, left) and BeWo cells (right) were surface-stained with CD116/GM-CSFR α Rabbit mAb (A25547, 2 μ g/mL, orange line) or Rabbit IgG isotype control (AC042, 2 μ g/mL, blue line), followed by FITC conjugated goat anti-Rabbit pAb staining. Non-fluorescently stained cells were used as blank control (red line).

Flow cytometry: 1×10^6 BeWo cells were surface-stained with Rabbit IgG isotype control (AC042, 2 μ g/mL, left) or CD116/GM-CSFR α Rabbit mAb (A25547, 2 μ g/mL, right), followed by FITC conjugated goat anti-Rabbit pAb staining.
