Background

The protein encoded by this gene is a member of the intercellular adhesion molecule (ICAM) family. All ICAM proteins are type I transmembrane glycoproteins, contain 2-9 immunoglobulin-like C2-type domains, and bind to the leukocyte adhesion LFA-1 protein. This protein is constitutively and abundantly expressed by all leucocytes and may be the most important ligand for LFA-1 in the initiation of the immune response. It functions not only as an adhesion molecule, but also as a potent signalling molecule. Alternative splicing results in multiple transcript variants encoding different isoforms.

Flow cytometry: 1X10^6 Daudi cells (negative control,left) and U-937 cells (right) were surface-stained with ICAM3/CD50 Rabbit mAb (A25722,2 µg/mL,orange line), or Rabbit IgG isotype control (AC042,2 µg/mL,blue line), followed by Alexa Fluor® 647 conjugated goat anti-rabbit pAb staining. Non-fluorescently stained cells were used as blank control (red line). Flow cytometry: 1X10^6 U-937 cells were surface-stained with Rabbit IgG isotype control (AC042,2 µg/mL,left) or ICAM3/CD50 Rabbit mAb (A25722,2 µg/mL,right), followed by Alexa Fluor® 647 conjugated goat antirabbit pAb staining.
