

# APC/Cyanine7 Mouse anti-Human CD3 mAb

Catalog No.: A26219

## Basic Information

### Observed MW

### Calculated MW

23kDa

### Category

Primary antibody

### Applications

FC

### Cross-Reactivity

Human

### Conjugate

APC-Cy7. Ex:651nm. Em:779nm.

## Background

The protein encoded by this gene is the CD3-epsilon polypeptide, which together with CD3-gamma, -delta and -zeta, and the T-cell receptor alpha/beta and gamma/delta heterodimers, forms the T-cell receptor-CD3 complex. This complex plays an important role in coupling antigen recognition to several intracellular signal-transduction pathways. The genes encoding the epsilon, gamma and delta polypeptides are located in the same cluster on chromosome 11. The epsilon polypeptide plays an essential role in T-cell development. Defects in this gene cause immunodeficiency. This gene has also been linked to a susceptibility to type I diabetes in women.

## Recommended Dilutions

FC 5  $\mu$ l per  $10^6$  cells in  
100  $\mu$ l volume

## Immunogen Information

### Gene ID

916

### Swiss Prot

P07766

### Immunogen

Recombinant protein of human CD3.

### Synonyms

T3E; TCRE; IMD18; CD3epsilon

## Product Information

### Source

Mouse

### Isotype

IgG

### Purification

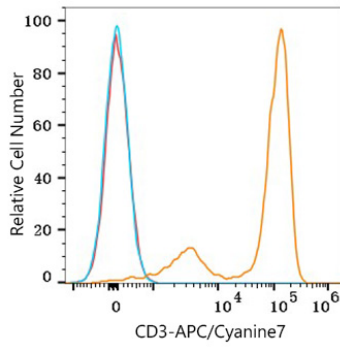

Affinity purification

### Storage

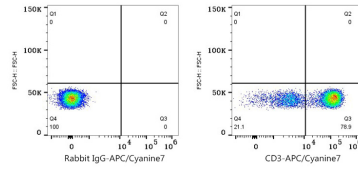

Store at 2-8°C. Avoid freeze.

Buffer: PBS with 0.09% Sodium azide, 0.2% BSA, pH7.3.

## Validation Data

1X10<sup>6</sup> Human PBMC were surface-stained with APC/Cyanine7 Mouse anti-Human CD3 mAb (A26219, 5 µl/Test, orange line) or APC/Cyanine7 Rabbit IgG isotype control (5 µl/Test, blue line). Non-fluorescently stained cells were used as blank control (red line).

1X10<sup>6</sup> Human PBMC were surface-stained with APC/Cyanine7 Rabbit IgG isotype control (5 µl/Test, left) or APC/Cyanine7 Mouse anti-Human CD3 mAb (A26219, 5 µl/Test, right).
