Background

Enables complement component C5a receptor activity. Involved in several processes, including astrocyte activation; positive regulation of vascular endothelial growth factor production; and regulation of granulocyte chemotaxis. Acts upstream of or within defense response to Gram-positive bacterium; neutrophil chemotaxis; and response to peptidoglycan. Predicted to be located in several cellular components, including apical part of cell; basolateral plasma membrane; and cell surface. Predicted to be active in plasma membrane. Is expressed in several structures, including brain; liver; neural ectoderm; and sensory organ. Orthologous to several human genes including OPRPN (opiorphin prepropeptide).

Validation Data

Flow cytometry: 1×10^6 C57BL/6 mouse splenocytes (negative control, left) and C57BL/6 mouse bone marrow cells (right) were surface-stained with PE Rabbit anti-Mouse CD88/C5aR mAb (A26709,5 μ l/Test, orange line) or PE Rabbit IgG isotype control (A24172,5 μ l/Test, blue line). Non-fluorescently stained cells were used as blank control (red line).
