Background

TER-119 is a mouse erythroid lineage-specific monoclonal antibody that reacts with erythroid cells at differentiation stages from early proerythroblast to mature erythrocyte, but not with cells showing typical erythroid blast-forming unit (BFU-E) and erythroid colony-forming unit (CFU-E) activities. TER-119 recognizes a 52-kDa molecule on erythrocyte membranes. TER-119 antigen is a molecule associated with cell-surface glycoprotein A but not with glycoprotein A itself.

Validation Data

Flow cytometry: 1×10^6 C57BL/6 mouse bone marrow cells were surface-stained with ABflo® 488 Rabbit anti-Mouse CD45 mAb (A23707, 5 μ l/Test) and ABflo® 500 Rat IgG2b isotype control (5 μ l/Test, left) or ABflo® 500 Rat anti-Mouse TER-119 mAb (A28233, 0.5 μ g, right). Total viable cells were used for analysis.
