Phospho-IRF3-S386 Rabbit pAb

Catalog No.: AP0091 7 Publications

Basic Information

Observed MW

Refer to Figures

Calculated MW

47kDa

Category

Primary antibody

Applications

WB

Cross-Reactivity

Human

Background

This gene encodes a member of the interferon regulatory transcription factor (IRF) family. The encoded protein is found in an inactive cytoplasmic form that upon serine/threonine phosphorylation forms a complex with CREBBP. This complex translocates to the nucleus and activates the transcription of interferons alpha and beta, as well as other interferon-induced genes. The protein plays an important role in the innate immune response against DNA and RNA viruses. Mutations in this gene are associated with Encephalopathy, acute, infection-induced, herpes-specific, 7.

Recommended Dilutions

WB

1:500 - 1:2000

Immunogen Information

Gene ID 3661 **Swiss Prot**

Q14653

Immunogen

Synthetic peptide. This information is considered to be commercially sensitive.

Synonyms

IIAE7; Phospho-IRF3-S386
