## Background

IL-12 is a heterodimeric cytokine composed of p40 and p35 subunits and is considered a largely pro-inflammatory cytokine. It is naturally produced by dendritic cells, macrophages, neutrophils, and human B-lymphoblastoid cells. IL-12?is crucial for the recruitment and effector functions of CD8+?T and NK cells.

Stability

This standard curve is only for demonstration purposes. A standard curve should be generated for eachassay.

No significant cross-reactivity or interference was observed.

No significant cross-reactivity or interference was observed.

Placed at $37^{\circ} \mathrm{C}$ for 3 days, the stability of the standard curve all conformto $\mathrm{CV}<10 \%$.
