Background

binds to the Fc region of immunoglobulins epsilon. High affinity receptor. Responsible for initiating the allergic response. Binding of allergen to receptor-bound IgE leads to cell activation and the release of mediators (such as histamine) responsible for the manifestations of allergy. The same receptor also induces the secretion of important lymphokines.

Immunogen Information

Immunogen
Recombinant Mouse IgE

Cross-Reactivity

No cross-reactivity in ELISA assay with recombinant Mouse IFN- γ Mouse IFN- β Mouse IL-20 Mouse IL-22 Mouse IL-24 Human IL-10
Has cross-reactivity in ELISA with Rat IL-10
