

Catalog No.: RP02929LQ **Recombinant**

Species	Gene ID	Swiss Prot
Human	4869	P06748

N-His

B23;NPM;NPM1;Phospho-Nucleophosmin-T199

Source <i>E. coli</i>	Purification ≥ 85 % as determined by SDS- PAGE
---------------------------------	--

Calculated MW	Observed MW
34 kDa	40-42 kDa

Please contact us for more information.

Supplied as a 0.22 μm filtered solution in 30 mM Hepes, 2 mM EDTA, 0.001 % Tween, 15 % glycerol, pH 7.0.

Reconstitute to a concentration of 0.1-0.5 mg/mL in sterile distilled water.

Nucleophosmin 1 (NPM1), also known as nucleolar phosphoprotein B23 or numatrin, is a member of the nucleoplasmin family. Nucleophosmin (NPM) is a nucleolar phosphoprotein that plays multiple roles in ribosome assembly and transport, cytoplasmic-nuclear trafficking, centrosome duplication, and regulation of p53. The NPM1 gene is frequently involved in chromosomal translocation, mutation, and deletion. Mutations of the NPM1 gene leading to the expression of a cytoplasmic mutant protein, NPMc+, are the most frequent genetic abnormalities found in acute myeloid leukemias. Acute myeloid leukemia (AML) with mutated NPM1 have distinct characteristics, including a significant association with a normal karyotype, the involvement of different hematopoietic lineages, a specific gene-expression profile, and clinically, a better response to induction therapy, and a favorable prognosis. Also, NPM1 is a crucial gene to consider in the context of the genetics and biology of cancer. NPM1 is frequently overexpressed, mutated, rearranged, and deleted in human cancer. Traditionally regarded as a tumor marker and a putative proto-oncogene, it has now also been attributed with tumor-suppressor functions.

Recombinant Human Nucleophosmin/NPM1 Protein is produced by *E. coli* expression system. The target protein is expressed with sequence (Glu2-Leu294) of human Nucleophosmin/NPM1 (Accession #NP_002511.1) fused with and a 6×His tag at the N-terminus.

Bio-Activity

Store at -70°C. This product is stable at $\leq -70^{\circ}\text{C}$ for up to 1 year from the date of receipt. For optimal storage, aliquot into smaller quantities after centrifugation and store at recommended temperature. Avoid repeated freeze-thaw cycles.

Validation Data

Recombinant Human Nucleophosmin/NPM1
Protein was determined by SDS-PAGE under
reducing conditions with Coomassie Blue.
