Background

Alemtuzumab Biosimilar uses the same protein sequences as the therapeutic antibody alemtuzumab.Alemtuzumab is a medication used to treat chronic lymphocytic leukemia (CLL) and multiple sclerosis. In CLL, it has been used as both a first line and second line treatment. In MS it is generally only recommended if other treatments have not worked. It is given by injection into a vein.It is a monoclonal antibody that binds to CD52, a protein present on the surface of mature lymphocytes, but not on the stem cells from which these lymphocytes are derived. After treatment with alemtuzumab, these CD52-bearing lymphocytes are targeted for destruction.

Reported Applications

ELISA, neutralization, functional assays such as bioanalytical P K and ADA assays, and those assays for studying biological pathways
