

Acylated Glucagon-like Peptide-1 Receptor Agonist

Catalog No.: YR0142

Basic Information

Molecular Weight

4.1 kDa

Endotoxin

<1EU/mg (<0.001EU/μg) Determined by LAL gel clotting assay

Sterility

0.2 μm filtration

Aggregation

<5% Determined by SECP

Purity

>95% Determined by SDS-PAGE

Background

Semaglutide, a recombinant peptide which presents 94% sequence homology to the human glucagon-like peptide-1 (GLP-1), differing primarily by two amino-acid substitutions at positions 8 and 34, where alanine and lysine are replaced by 2-aminoisobutyric acid and arginine, respectively. Liraglutide is made by attaching a C-18 fatty acid (stearic diacid) with a glutamic acid spacer on the remaining lysine residue at position 26 of the peptide precursor. Semaglutide is resistant to the dipeptidylpeptidase-4 enzyme which degrades the natural hormone. As a GLP-1 receptor agonist, Semaglutide mimics the action of the human incretin glucagon-like peptide-1 (GLP-1), thereby increasing insulin secretion and increasing blood sugar disposal and improving glycemic control. Semaglutide is an anti-diabetic medication used to treat type 2 diabetes, obesity, and chronic weight management.

Reported Applications

ELISA, neutralization, functional assays such as bioanalytical PK and ADA assays, and those assays for studying biological pathways

Immunogen Information

Clone

Semaglutide Biosimilar

Isotype

Immunogen

Recommended Isotype Control(s)

Recommended Dilution Buffer

1×PBS pH 7.0

Product Information

Production

Purified from cell culture supernatant in an animal-free facility

Purification

Protein A or G purification

Storage

2 - 8°C for up to 4 weeks and -80°C for long term storage (Avoid repeated freezing and thawing)
