Background

The anti-HEL monoclonal antibody (hen egg-white lysozyme) in nature is suitable for use as an isotype-matched control antibody to estimate the degree of non-specific binding by an antigen-specific antibody. The HEL D1.3-based recombinant isotype control and mutants (natural and engineered isotype controls) are useful for in vitro and in vivo studies from ELISA, Western blot (WB), to cell-based assay to animal model study.

Reported Applications

an isotype-

matched negative control use d in ELISA,Western Blot (WB), Flow Cytometry (Flow),Immuno precipitation (IP),Immunohistoc hemistry (Paraffin) (IHC (P)),I mmunohistochemistry (Frozen) (IHC (F)),and in vivo animal model research
